Cafeteria

Introduction

About Our Project

SnackSpace is a cafeteria management platform designed to simplify food ordering and enhance the dining experience for students. The platform features digital menus, real-time order tracking, meal customization, and a feedback system, all aimed at improving cafeteria efficiency and service quality.

Features

Menu and Meal Customization

- Dynamic menu displaying daily specials and regular items with dietary details (vegetarian, vegan, gluten-free).
- Users can customize meals by adjusting portion sizes, selecting ingredients, or adding side dishes.
- Ensures a personalized dining experience based on individual dietary needs.
- Backend stores menu data; the frontend ensures a smooth, interactive customization process.

Features

Digital Ordering & Real Time Tracking

- Online ordering with multiple payment options (Online UPI and Cash-On-Delivery).
- Real-time tracking of meal status (e.g., "being prepared", "ready for pickup").
- Reduces wait times and improves the efficiency of food collection.
- Backend processes orders and provides status updates; the frontend delivers real-time tracking for users.

Features

Nutrition Details & Student Feedback

- Provides comprehensive nutritional and allergen information for each meal.
- Highlights important details like calorie content and potential allergens.
- Allows students to make informed, health-conscious meal choices.
- Includes a feedback system for students to rate meals and cafeteria service.
- Feedback helps improve meal offerings and overall service quality.

Tech Stack

Frontend

- React.js
- Bootstrap

Backend

- Node.js
- Express.js
- MongoDB
